

What makes these eyes worth the tag, despite all those other fancy eyes out there, is the fact I include the UV maps to these eyes. That means you can mod them HOW you REALLY want them, and not limited to some so called "Unlimited" HUD or whatever.. let alone the scripts that come with that garbage.

With my eyes, they are only limited by your imagination. You can make one eye one color, the other eye another color. You can texture them separate as well. You can make them transparent, adjust the glow.. anything you want. They are rigged so you don't need to really worry about any huge adjustments.

I included the Alpha texture as well for you.. Pretty much everything, aside from the mesh eyes, is full perm so you can mod with true freedom.

These work with any avatar, mesh or non mesh, that use the SL avatar eyes. More eyes coming soon. Any questions or comments? Drop me an IM. I check my email daily.
