.:TT:. Hair Generators

Selling hair you bought full perm is one thing, selling hair that has YOUR NAME as the creator is something totally different! From now on this is possible for every designer in SL.

The hair models in this collection are non-mesh, so normal twisted prims, sculpted and flexible prims are used to create the different hairstyles. The big advantage is that you, as the creator, can change the model to your liking: add some curls, move a lock, lower a ponytail. You may want to adjust the hairstyle to a hat you sell or add some jewelry or flowers to it. Having a hair piece made of normal prims allows you to adjust the model exactly to your likings.

Each hair model comes with two generators: one to make some hair strands out of a prim of yourself, and one that creates the model using these hair strands. This results in a hair piece made of many prims that ALL have your name as the creator.

COPY BOT PROTECTION - In the description of the hair strands you will find the text: "created by [your name]". This text will be used in every prim of your hair model, copy botters usually do not change all the descriptions in a botted hair, this way you will be able to always recognize your hair. Simply right click the hair and choose 'Inspect' from the pie menu.

A hair model is created in a Basic White color. In the pack your will find a Dye Set to create a Basic Black version of the same model. After the model is created simply drag in the textures of the Dye Set, click the hair and the color of each and every strand changes, the textures and script disappear and the newly colored hair is ready to sell.

MORE COLORS?
There will be dozens of hair textures available. Each Dye Set contains 22 hair textures, a script and 2 hair bases in the color of the Dye Set. A Dye Set can be used on every model made by a TT Hair Generator. This means you need to buy a certain color only once to use it on current and future models.
The reason I created so many different hair textures is that you don't want to spend a lot of money on a hair model, just to find the exact same hair being sold by many others. By choosing your favorite hair color you will stand out in the crowd.
