

How do I install the needed script?

Attention: always work with a copy, never ever use the original!

- visit a sandbox or any other convenient sim where you can rez
- find your original EasyMover(RLV) item in your inventory and rez it on the ground
- right-click -> edit the EasyMover(RLV) item on the ground and open the 'Content' tab
- move the contained script 'EasyMover(V*)' to your inventory
- move the contained 'Config' notecard to your inventory
- right-click -> delete the EasyMover(RLV) original from the ground
- find your EasyMover(RLV)-*Mod item in your inventory and rez it on the ground
- right-click -> edit the EasyMover(RLV)-*Mod on the ground and open the 'Content' tab
- move the 'Config' notecard from your inventory into the EasyMover(RLV)-*Mod item on the ground
- move the script 'EasyMover(V*)' from your inventory into the EasyMover(RLV)-*Mod item on the ground
- close the edit window
- take the EasyMover(RLV)-*Mod back into your inventory

That's it, now you can attach your newly modded EasyMover(RLV) and give it a try.
