

Personal Chat Extender

V 2.0

Coded and copyrighted by Becka Aulder, most recent 2/2019

Quick Start Guide:

This HUD is for extending you avatars normal speech beyond the standard 20 meter range. Using this HUD you can be "heard" in 10 meter increments up to 90 meters away or across the whole parcel.

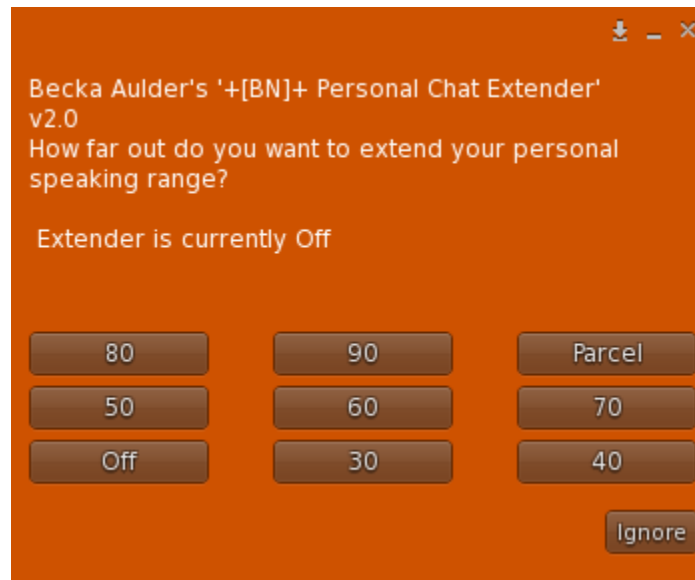

To activate, wear the HUD. It will attach to bottom center by default but can be moved to any space on your HUD that is most convenient for you.

Touch the HUD to bring up its menu to select a range and turn it on. Touch again to turn it off. Touch the QC bar to send one line of text to your last used range.

Please note that the HUD cannot distinguish between when you are talking normally, when you are whispering, and when you are shouting.

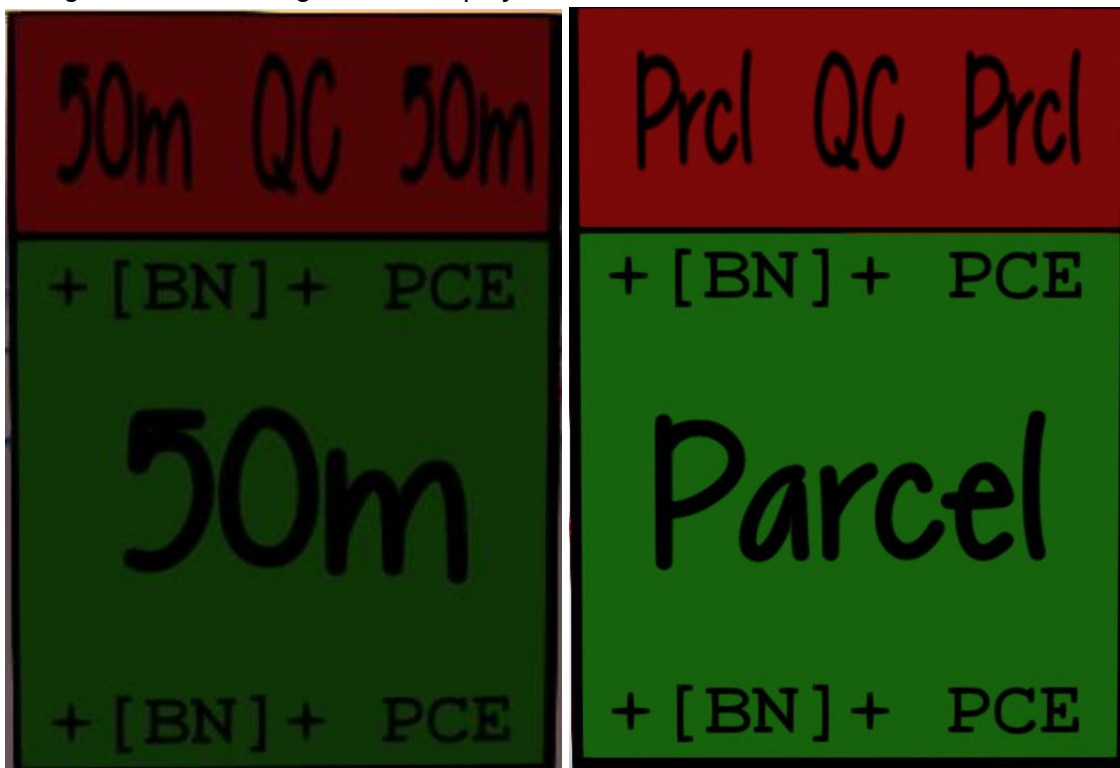

- If the HUD is active and you shout, your regular speech is sent to 100 meters. Everyone within 20 meters of you will see just the one line of text. Those that are between 20.1 meters and to the selected range will see the line of text twice. Those that are beyond the selected range on the HUD (if it is not set to Parcel) and 100 meters will see only 1 line of text.
- If you Whisper and the HUD is active, those within the standard whisper range of 10 meters will see your text, and those 20.1 meters away and up to the limit of the range selected will see your text, but those between 10.1 meters and 20 meters will not.

Menu Options:

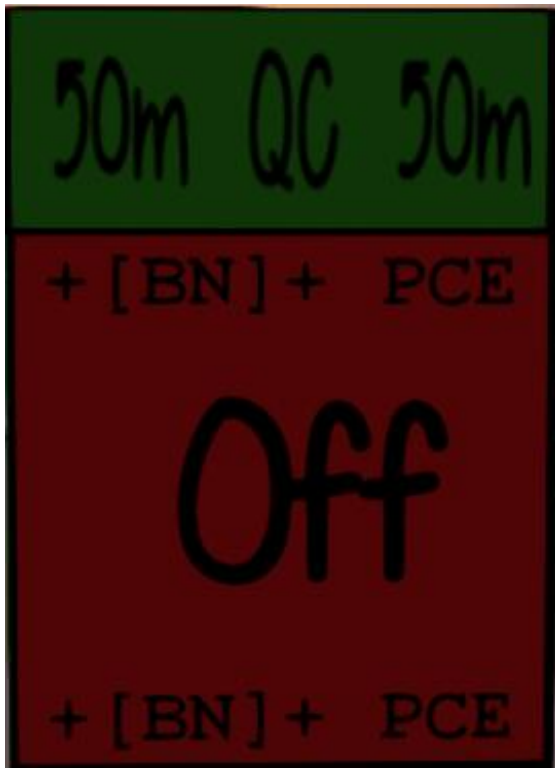

This image is the main menu for the HUD.

- Select the range at which you wish to have your speech extended to and the HUD will turn green and the range will be displayed on its face.

- Select Off to disable speech broadcasting. The HUD will turn red and show the word “Off” on its face.

Quick Chat Option:

Across the top of the HUD is the quick chat (QC) bar. This bar is for quickly activating the HUD to extend your speech for one line of text. It will default to your last used chat extension range. Simply touch the bar and say something within 60 seconds

The Quick Chat bar will turn green to indicate that it is active. The line of text will be broadcast to everyone in the selected range and the HUD will automatically deactivate turning the quick chat bar to red again. If nothing is said/broadcasted in 60 seconds the quickchat bar will turn off again automatically

If you change your mind and don't want to wait the 60 second time for it to turn off automatically, touch the quick chat bar again and it will deactivate.

- The very first time you wear the HUD the range for the quick chat bar will be set to "Off".
- You will need to activate the main HUD to a range and then turn it back to "off" to initialize the quick chat bar.
- Anytime you want to change the range of the quick chat, simply activate the main HUD to the desired range and then turn it back off again.
