

Advanced Hypercuzzi

With this great new product we offer something that is totally new and visually appealing. Many months were spent on perfecting the special effects from the water to lighting and particles there is not a single standard / free or prefab texture used in this build everything is custom made specially for this hot tub.

Realistic splash: As you enter the Hot tub depending on how fast you enter a splash will appear based on the speed at which you impact with the water. The harder the impact the bigger the splash will be. Also shooting the water with any type of weaponry will trigger a splash according to projectile speed.

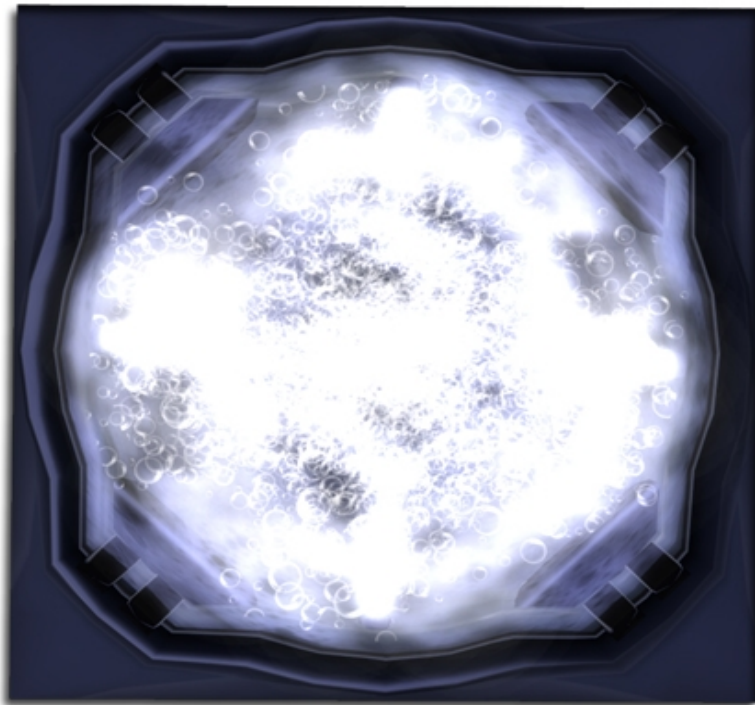

Wake water effect: As you move through the water a wake effect will be triggered giving the illusion of parting water.

This is a larger than normal hot tub there is lots of room to spread out. This Hot tub would be great for any type of environment weather it be your personal sky box house or Night club. Offering the ability to seat 4 single avatars or 2 sets of couples in snugly cuddly animation.

Floating and swimming animations: There are 3 floating animations in the set of single pose animations so you are not limited to only sitting in this hot tub.

Single sitting animations: There are 10 single sitting poses allowing you to sit in various poses around the tub even lay or sit on the edge of the tub

Couples animations: There are 6 couples animations that allow you to cuddle and snuggle with your partner. These are custom made exclusively for this build you will not find these couples animations in any other products in SL.

Setup tips:

You may want to first think about how and where in your location you want this hot tub setup its first important to make the correct measurements to make sure this tub will fit your desired location. This Hot tub is 6.2 x 6.2 x 1.8 Meters

Setup Steps "please follow in this sequence"

1. Drag and drop the object in your inventory named "Hypercuzzi" onto your land. You will get 2 permission dialogs

you must click yes to these.

2. Select the hot tub and rotate / position it to your liking

3. Click on the hot tub and click Setup.

4. The Setup is complete please remember once you click Setup the only way you can move the hot tub again is by either selecting all of the parts and moving it or deleting it and starting again. Once you have clicked Setup it is finalized.

Need help with setup? Give me an IM and I will assist ASAP

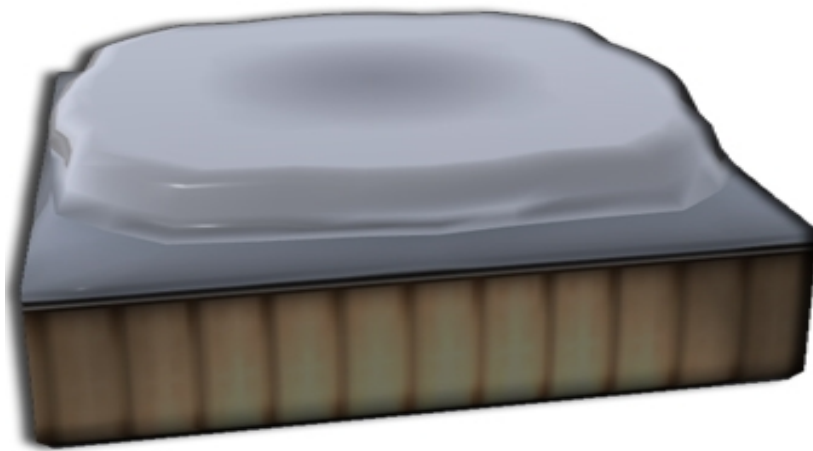

Options:

Click the Hot tub and it will give you an options dialog.

On / Off: Toggles the Hot tubs bubbles stream and sounds

Light: Toggles the lighting system on and off. This is using 4 light beams and 1 light source to create an amazing realistic lighting effect.

Cover: Put a cover over your hot tub as seen in the image.

Color: Change the color of the tub its self

S Color: Change the color of set seats

Hide / Show: will show or hide the pose balls

Shiny: toggle the shiny effect on or off.

Reset: Allows you to reset the hot tub back to its defaults.

Poses:

Setting your pose / animation has never been so simple. All you need to do is press page up and page down to toggle each animation.

Blue balls: For males

Pink balls: For females

The male "blue" pose balls will force the opposite female pose ball to trigger the couples animations by toggling through using page up and page down once you hit the couples animation sets they will begin to cycle through each couples pose

The female "Pink" pose balls can toggle 13 single animations using page up and page down but can not trigger the couple's animations.

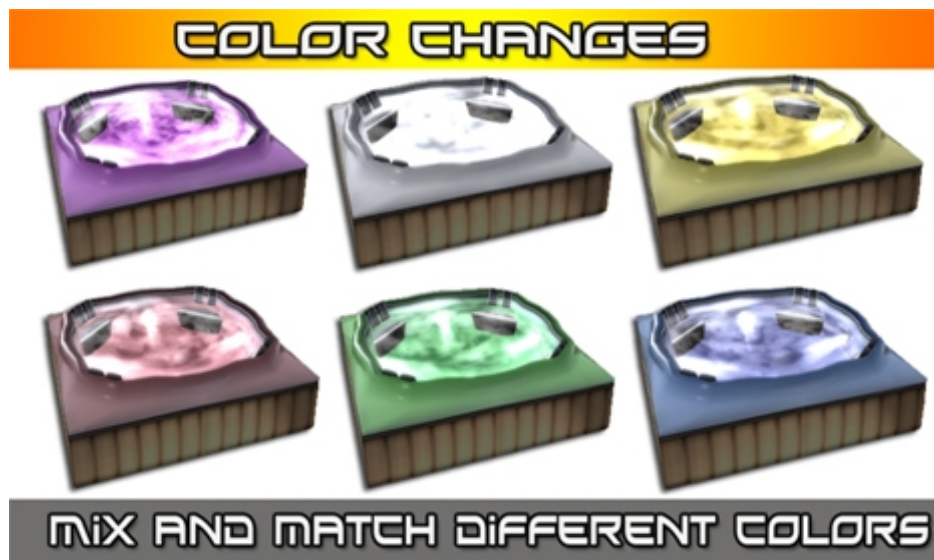

Pose position adjustments: It is possible to adjust the height of each pose/animation and have it saved into the memory. To do this

1. Sit on the pose ball you want to edit
2. Click the out side of the tub and click Show this will show all of the pose balls.
3. Click on the pose ball you want to adjust click + or – to adjust once happy click save then the new position will be added to the memory.

Come and check it out in world bring your friends or your partner and put it to the test.

Each animation has been animated by my self there are no prefab or freebie animations used in this build so you can be assured you are not just buying the same old animations used in all most every thing.

FAQ:

Q: I'm sitting on the male pose ball and I am animated as one of the couples poses but my partners pose ball is not being triggered?

A: Your partner is sitting on the non matching pose ball set. They need to stand up and sit on the other pink ball

Q: I am mad I don't see this Hot tub as I see in the pictures?

A: This can be a number of reasons you may have your graphical quality down low... You need to be able to render shiny, glow, particles, and have a decent object mesh detail setting to be able to have the full experience. If your computer only just meets the second life running requirements I would give this hot tub a miss. These marketing images were taken in world with the maximum setting possible remember you can always check it out in world before you buy to avoid any dissatisfaction.

Q: I tried to move it after I have clicked the finalize setup button. But only part of it moved now I have pose balls in one place and the tub is elsewhere what's wrong?

A: This Hot tub comes with a specially made setup helper system once you have clicked setup these helper prims

unlink and delete them self's There are two ways you can move this tub again.

1. Press Ctrl Alt T so you can see transparent objects then select all of the parts and then move the entire object set to its new location.

2. Delete your currently rezzed hot tub and rezz a new copy and allow the setup helper system to help you move it into a new location.

Q: Why is this Hot tub in 3 parts why not just link it all together?

A: In order for this tub to function as intended 2 parts must be phantom and one part must be solid.

Q: When I clicked Setup It said the helper system unlinked and removed the helper prims but it also removed part of the hot tub?

A: There is some thing wrong with the Sim you are in I would request a sim restart and try again once the sim has been restarted.
