

Moon Meditation Bell

Black Paw Workshop hopes you find the bell both beautiful and functional.

Quick Guide

- Touch the moon to show the menu.
- To start a meditation session, choose a time duration (e.g. 10 Minutes).
- The volume can be changed using the "Volume" button.
- Other settings can be changed through the "Options" button.

Main Menu

Touching the moon (or the base) will show the main menu. The menu has three parts:

1. Preset meditation sessions.
2. Custom meditation sessions.
3. Settings.

The presets in the first two rows of buttons start meditations for 3, 5, 10, 15, 20 or 30 minutes in duration.

The third row of buttons are reserved for customizable meditation durations.

Touching the Bell

By default, when a meditation session is not in progress, touching the bell will cause it to ring.

There may be times when touching the bell would not be appropriate. The "Touch Off" button disables touching the bell. Clicking this button again will enable the bell again.

Volume Menu

Volume has nine levels. There are convenient minimum, moderate and maximum settings.

Options Menu

The options menu has a lot of choices.

Meditation Type

The Moon Meditation Bell supports both silent meditations and bell meditations.

- A silent meditation rings the bell once at the beginning. The bell will remain quiet for the rest of the meditation session. At the end, three bells will sound. The "Final Bells" setting can change this.
- A bell meditations rings the bell regularly for the duration of the meditation session. At the end, three bells will sound. The "Final Bells" setting can change this.

Final Bells

The Moon Meditation Bell can play three, one or no bells at the end of a meditation session. The button cycles through the choices.

Text Control

The Moon Meditation Bell can display the following information above the bell:

- Detailed information about the bell's settings. During a meditation session, it will also show the time remaining. The timer updates roughly every minute.
- A countdown timer during a meditation session; no text otherwise. The timer updates roughly every minute.
- No text at all.

The button cycles through the choices.

Custom Meditation Durations

The second and third rows of buttons set or clear the three custom meditation times found on the main menu.

- "Set Time 1" sets the duration for the first custom meditation slot.
- "Clear Time 1" erases the first custom meditation slot.
- "Set Time 2" sets the duration for the second custom meditation slot.
- "Clear Time 2" erases the second custom meditation slot.
- "Set Time 2" sets the duration for the third custom meditation slot.
- "Clear Time 2" erases the third custom meditation slot.

Access

The fourth row has an "Access" button which only the bell owner can see. The owner determines who may use the bell: everybody, group members, or only the bell owner.

Materials

Because the Moon Meditation Bell was designed to be beautiful, it is best viewed with your viewer's Advanced Lighting Model enabled.

If your viewer does not have this enabled, the Moon Meditation Bell should still look very nice.

Trivia

This bell was inspired by those found in the Temple of Khenarthi's Wind in Pelatine around the year 280 of the Second Era, under the leadership of Clanmother Tadali.

The moon is a tribute to the Khajiiti people.

Miscellaneous

This is wholly original creation of the SecondLife resident BlackPawWorkshop.
