

Thank you for shopping at The Domineaux Effect :)

In the package is two versions of the cabinet.

TDE ~ Apothecary Cabinet - this version is 8LI and the drawers open and has a gift giving function and texture change. There is a configuration notecard inside the contents of the cabinet where you can set the length of time the drawers will stay open or if you like you can disable autoclose and they will remain open until manually closed again.

TDE ~ Apothecary Cabinet B - is a simpler version which is 4LI and has texture change but the drawers don't open.

To access the menu on either version just click on the metal frame that the cabinet sits on. The menu is only accessible to the owner.

If you want to resize the cabinet please use the resize options in the menu.

Resizing manually will not adjust the drawer open/close distance to stay in sync with the new size and will cause problems with the drawers functionality.

If you resize make sure to click the DONE button in the resize menu rather than the ignore button or the new size won't be recorded to the script and the drawers will become unaligned with the cabinet.

Gift Mode.

Inside the cabinets contents is a configuration notecard with some settings that you can adjust for the gift mode such as how often a new drawer is randomly selected and the messages that will be said in chat to the user.

You can put an item into the contents of the root prim of the cabinet and a copy of this item will be given out to the user when they open the target drawer.

The script will keep track of users for a short time to prevent the same person from trying over and over again. The list will be cleared if you turn gift mode off.

If you would like to give out more than one item, you put the items into a box/prim and then put that box into the cabinets contents.

Texture Change.

when you select "Texmode On" in the menu you can click each drawer face and cycle through the different textures for that drawer and create your own custom look to the cabinet. You can also change the texture of the cabinet itself as well as toggle the wall or floor shadow off/on by touching them.

When you are done just select "Texmode Off" from the menu.

I included the texture for the little paper inserts on the drawer handles, it is full perms so you can save it and edit in photoshop etc if you want to add some text or something to them.

If you have any questions or issues please send me a notecard as IMs sometimes get lost.

Sincerely,

Domineaux
