Topic	*TA* Analog Clock
Last edit	5 April 2011
SL Marketplace URL	https://marketplace.secondlife.com/p/TA-Analog-Clock/2127012

Description

This is an analog clock, which can be extensively customized via a single integrated, menu-based script. Customizing the object is easy, however, you will get extra instructions for the functions that require user input via chat, these will only appear to you in your local chat.

The hands of this clock are like most of them do: they move when time progresses. However, these hands come in different styles, can be set to display any time you like, will never run out of battery power and can be viewed with many backgrounds, including your own!

Also, this clock can resize. From a good viewable XS size (which is actually not even that small) to ridiculously big. So, if for some reason you need a big clock, that's also possible.

Any easy to use, customizable clock with a single menu that contains many features. Tired of your background image? Change it! Don't like that second hand? Turn it off! Want the hands to display a different color? Change that too! Change appearance of hands? Sure you can! Well, you're getting the point there.

Also, the item has a built-in update function, so when a newer version is released, it will be sent to you with a single touch of a button.

Of course, if you have questions or you want support after buying the item (read the notecard first please!), you are free to IM Tutti Anatine for assistance with your (future) purchase. Please read the store policy on the bottom of this document for more information.

Basic product information

Version	2.0
Prims	5
Copy	yes
Transfer	no
Modify	no
Modifiable via script	- User permissions (owner, group, everyone) - Size - Background image or color; - Hand style and color (all or individual); - Hour and minute time offset; - Second hand turn on/off; - Full bright on/off; - Background shininess off/low/medium/high; - One-button restore to default option;

The main menu contains a script to check for product updates. Note that the update server is set to not give out the same update more than once a day.

The communication between scripts are handled via link messages, these are a low-lag alternative to communication via chat. The only times chat channels are open, are when operating the menu or when a channel is opened for user chat input. All channels close 60 seconds after being (re)opened to reduce lag.

This set contains

- 1 Analog Clock

Modifying without script

-
- The object itself cannot be edited without using a script. However, it can be moved around to change its position via the edit/build menu. (Right-click the object and select 'Edit')

Modifying via script

-
- Click any part of the object to make the script's menu appear. From here, you can select an option to change the way the objects behaves/looks.

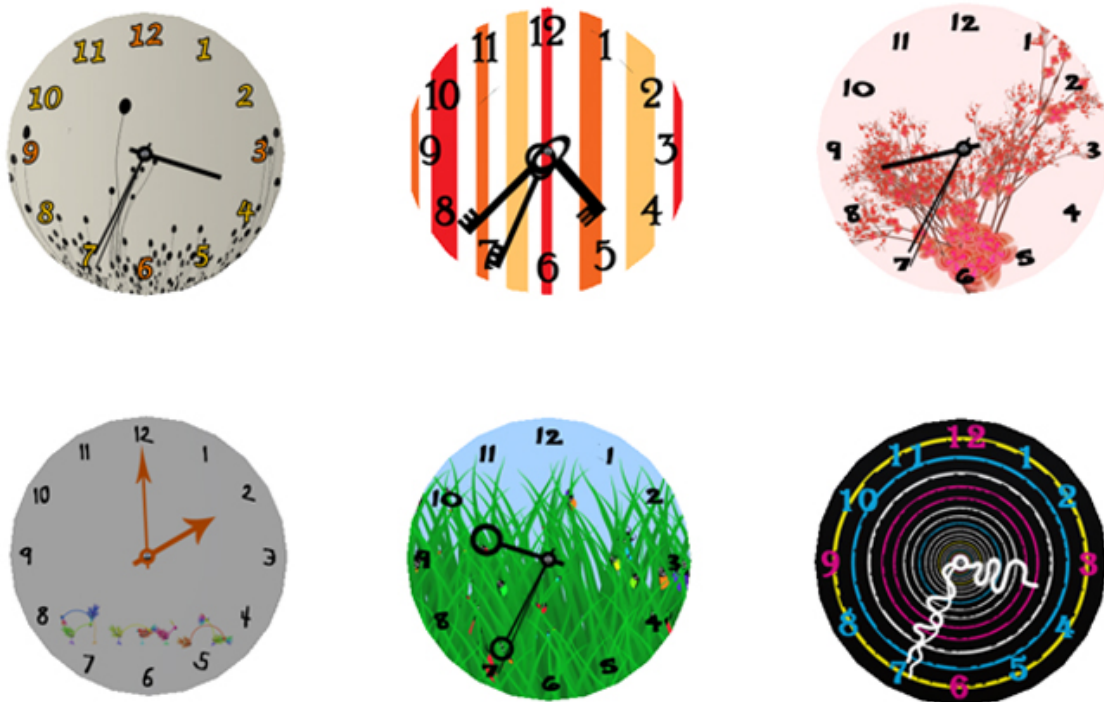

Other information

-
- On default, the clock will display Second Life Time (SLT).
 - If you find that the second hand is lagging, or you just want to hide it, you may choose to turn off this hand via the 'Extra' menu.

Credits

-
- The Prim Resizer script is made by Tatiana Niven (Tatty Theatre).
 - The default background contains brush images from the Photoshop brush set 'Stalks', which is freely available on the internet.
 - Some of the preset background Images (Beetles, Blossom, Birds, Tunnel) contain parts rendered by Context Free Art, the render codes for these were provided by their makers via the CFA gallery.
 - The update functionality is powered by Hippo Technologies. I only slightly modified the updater script used inside the clock.
