

Status Indicator Sign

To setup the sign:

- Rez the sign
- Edit the notecard called "Status Indicator keys"
- When you save the card it will reset and reread the card.

*Note: I've seen a few cases when it didn't reset properly after a reload.
To fix this the owner just needs to say '/350 reset'*

Editing the keys Notecard:

The notecard needs to have one (1) key per line. You can find an avi's key by doing a *people search* for them, and in most viewers it's listed as 'Key:'

You can have 2 additional options on the line with each avi.

If you put a second texture key on the line, it will use that image instead of the avi's profile picture. This is good on a RP sim were an avi wants an appropriate image. Note this second key *MUST* be a valid texture key.

Second you can put a text string that is displayed over the status screen.

Example:

```
f6c7d153-a66c-467b-a4a4-ee0b01777d3c  
f6c7d153-a66c-467b-a4a4-ee0b01777d3c Tech Sgt Chin  
f6c7d153-a66c-467b-a4a4-ee0b01777d3c 4100480c-b0d2-e0aa-83b4-cff7e56686a5  
f6c7d153-a66c-467b-a4a4-ee0b01777d3c 4100480c-b0d2-e0aa-83b4-cff7e56686a5 Sierra Dawn
```

Line 1: my profile picture is shown with my Username "Sierra Thistle", is used as the title.

Line 2: my profile picture is still used, but my title shows as "Tech Sgt Chin".

Line 3: my profile picture is not use, instead a different "custom" image is used, it still titles my picture as "Sierra Thistle".

Line 4: a special image is used, and my title is set to "Sierra Dawn".

Configuration Notecard:

There is a Configuration notecard called 'Status Indicator config' the following configuration commands are understood.

- title on/off - *Sets the hovertext title on or off.*
- delay NUMBER - *how many seconds before switching to the next image*
- title_color VECTOR - *this is a SL color vector to set the title color*

- backlight INTEGER – turns on the backlight for the texture, ranges from 0 (off) to 100 (full on). For best results keep it below 20, 5 works best under most lighting conditions.
- overlay KEY - *this is a key for a 4:6 transparent texture the left 4:3 region is displayed when the person is offline, the right 4:3 region is displayed when they are online.*

Note: I can send you a Photoshop file, .psd, if you drop me, Sierra Thistle, a notecard of the default overlay. You then save the file as a .png and upload the texture (which will cost you \$L10.)

Example:

Title on

Delay 30

Title_color <0.9,0.3,0.6>

Backlight 5

Overlay d837cc72-b15b-a89a-da8c-ca888c4233d9
