

# ***Kassturm Lucky Meeroo Stump 2.0 Manual***

***By Kassturm***

The next generation of Meeroo random nest vendors is here! With Meeroo's highly dependent on compatibility, we heard the feedback loud and clear that the 1.x generation of our random nest giver was, well... 'too random'.

A complete re-write from the ground up introduces many new features, including the biggest – a custom nest boxing system that will give you the power to let your buyers have some control over the nests they receive; you can allow them to **choose** the Gender and/or the Personality of the nest! The rest is still chance.

- Random Nest Giver specifically designed for Meeroo Nests
- Load up to 300 nests at the same time
- Custom boxing system that's easy to use and setup
- Easy notecard configuration
- Select from 4 buying modes for your buyers:
  - Can be completely random (like our 1.x generation nest givers)
  - Buyers can select Gender only.
  - Buyers can select Personality only.
  - Buyers can select **both** Gender and Personality!
- Instant Message alerts when your stump is empty!
- Customize the price and text color.
- Copyable with FREE Updates!

## ***Getting Started***

Boxing and loading nests into the Lucky Meeroo Stump is the single most important thing to do, and is a requirement for the stump to operate as intended. Nests **must** be boxed this way, regardless of what options you are presenting to your buyers.

### ***Instruction Sign***

- 1) A Mod/Copy instruction prim sign is available in the box, to rez for your Buyers. This can be resized if needed.

### ***\_Setup Notecard***

- 1) Rez the Lucky Meeroo Stump.
- 2) Edit the stump and locate the \_Setup notecard. Make any changes to the notecard and Save it.
- 3) Click the stump and choose 'Load\_Setup'. The stump will reload with your changes.

### ***Boxing and Loading Nests***

- 1) Click the stump and choose 'New Nest'.
- 2) Select the Gender and then Personality.
- 3) A box will rez and configure itself. Place your nest into the box (using Edit to drag into its Contents). Only 1 nest per box!
- 4) Take the box and then place it into the Contents of your Lucky Meeroo Stump.
- 5) Repeat as necessary.

**Note:** Any other objects (including un-boxed Meeroo Nests) will not be recognized by Lucky Meeroo Stump v2.0 so following the steps above is a requirement.

## ***Buyer Choices***

Your Lucky Meeroo Stump can be configured in 1 of 4 ways, each determining what control your buyers have, if any, over the type of nest they receive. This can be configured in the \_Setup notecard on the 'buyerchoice' line.

- 0 – Setting this to 0 will turn off any choices the buyer receives. It will deliver a random nest. This is the same behavior as our older 1.x generation of random nest giver.
- 1 – Setting this to 1 means that buyers will get to choose Gender only.
- 2 – Setting this to 2 means that buyers will get to choose Personality only.
- 3 – Setting this to 3 (which is the default) means that buyers will get to choose **both** Gender AND Personality.

**Note:** The Lucky Meeroo Stump will only provide the gender and personality combinations based on what you have loaded into your Stump at any given time. i.e. if you have no Aggressive nests then that Personality option will not be presented. Likewise if you only have Aggressive Male nests, Aggressive will not be available for someone choosing a Female nest.

## ***Advertising Inventory***

On by default, and highly recommended, Inventory Advertising is the basis of the 2.0 generation Lucky Meeroo Stump. This controls whether the buyers see the makeup of the nests in your stump. Turning this feature off means that all the floating text information about the ratio of male to female nests, and the breakdown of personality types will not be shown.

We recommend leaving this on.

## ***Alerts***

On by default, your stump will Instant Message you when your stump runs out of nests. Note that you may receive this IM on initial setup too.

## ***Refresh Button***

A known issue with LSL (Linden Scripting Language), means that sometimes the Lucky Meeroo Stump will not recognize it is empty if you manually take all your nests out of the stump (by dragging them back to your inventory). If this happens (as its sporadic), click the 'Refresh' button in the stump menu to update the floating text.

## ***FREE Updates Policy***

You will receive free updates automatically. **Note:** So that you are not spammed with updated ones constantly, your Lucky Meeroo Stump will check for updates approximately every 2 days. This is to allow time for a new one to be delivered and also rezzed in world; no one likes to be spammed.

## ***Disclaimer & Refund Policy***

Kassturm Lucky Meeroo Stump is a 3<sup>rd</sup>-party product designed for use with the Malevay Studios' "Meeroo" breedable nests. Kassturm and Lucky Meeroo Stump are not affiliated with, sponsored by, or endorsed by Malevay Studios. Any technical support or questions on Lucky Meeroo Stump functionality or use should be directed to Sturm Hellershanks or Cassidy Jameson.

Kassturm Lucky Meeroo Stump is a traffic generating gadget and seller tool designed to help you sell Meeroo Nests. It gives the buyer some control over the type of nest they receive, while still maintaining the feel of a random/chance game.

**Refunds** of Kassturm Lucky Meeroo Stump are not available as it is a No-Transfer product. However, if you did purchase more than one Lucky Meeroo Stump in error, you may be reimbursed the cost of the duplicate transaction(s) as long as it is brought to our attention within 72 hours of the purchase.

**Note:** Marketplace purchases where the orders were delivered to separate avatars are not included. The above is intended to assist multiple deliveries to the same avatar, and/or multiple in-world purchases to the same end-user avatar.

Provide proof of your purchases in a notecard and send to 'Sturm Hellershanks'.

## **ChangeLog**

### **v2.0 -**

#### **NEW (Basically a complete overhaul):**

- Custom boxing system for nests is now required.
- Options giving your buyers control over choosing Gender and/or Personality are now available.
- New and improved Floating Text gives a breakdown of your nests.
- New look. Still only 4 prims!

#### **Bug Fixes:**

- Fixed a bug where floating text sometimes would not appear if only 1 nest was available.

#### **Changes:**

- Optional taglines have been reduced from 2 to 1.
- DisplayName option was removed completely.
- Website info for looking up nest information was removed due to boxing system.

### **v1.1 -**

#### **NEW:**

- Inventory Advertising: If your stump has more than 3 nests in it's inventory, you can have it randomly display the names of 3 of the nests -- this will change every 20 seconds. If you're savvy, you *\*could\** also re-box your nests and call the Object something descriptive...

- Tag Lines. 2 Free lines of text so you can tease your clients about the types of traits lurking in the nests in your stump!

- A non-owner menu gives a menu. 'Website Stuff' button provides a way where your clients can get information about your nests from the worldofmeeroos.com website, giving them the URL information, and an example URL from an actual nest in your stump. Will not function if the stump is empty.

- As a caveat, the default 'left-click' action for the stump is 'Touch' and not 'Pay'.

#### **Improvements:**

- Less floating text overhead.
- If no 'storename' is entered, your name no longer prints as an alternate.
- Decreased the title of the floating text to be less self-promoting.

#### **Bug Fixes:**

- 'shownests' now correctly turns the nest count on and off.

### **v1.0 - Initial Release! Yay!**
