?

How to begin with my Yukiko?

Yukiko first set up so simple, just drag your Yukiko from your inventory to the ground, then click to open the dialog box. By default, there's two profile available : White Yuki and Black Yuki. Choose the profile of your choice and wait the complete configuration of your Yukiko...Ready ! Click it again, new options are available !

What options are available in my Yukiko ?

By default, there's some very cool options in your Yukiko, your pet can follow you or a chosen friend, it can also follow your camera or jump in your arms to follow you anywhere through teleports. It's unique physics engine gives to Yukiko smooth and realistic moves without any lag.

Three ways to control your pet : by touching it, with the HUD or simply by giving your instructions directly to your pet in the local chat !

How to do with the basic options ?

Click your Yukiko, and choose the command in the dialog box. Or click your HUD, choose the pet in the first dialog box and the command in the second, that's all. You can manage all your pets with your HUD, there's no limits !

You can also use to the chat commands and give your instructions directly to your Yukiko. For that just call your pet by it's name with the command, example 'come here Yukiko' and your pet will come to you. There's no importance in the words order, 'come Yukiko' or 'Yukiko come here' will also work. Only the pet name and the keyword 'come' are required.

The keywords are :

- '**come**' to make your pet going back to you
- '**stay**' to ask to your Yukiko to move in a small area
- '**stop**' and your pet will stop to move
- '**follow me**' and your pet will follow you
- '**follow**' to choose a friend to follow
- '**arms**' and your pet will jump in your arms
- '**camera**' and it will follow your camera

Don't forget to add the name of your pet to each command, you can also call multiple pets at the same time, example : 'Yukiko, Kitoki, come here'

Does I need to mention that if you give the same name at different pets they will all respond when you call them, just logic !

Is it possible to allow my best friends to play with my Yukiko ?

Of course, just open the profile notecard and add the names of your friends in the access list (names of the profile notecards always begin by !config). Now your friends will have full access to the admin options !

Can I give a new name to my pet ?

Yes, it's an evidence. The only thing you can't change with your Yukiko is it's birthdate, it will keep it for life.

What can I teach to my Yukiko ?

So much, really, the only limit is your imagination. You can teach thousands of keywords and responses to your pet, add thousands of functions, called by your own buttons or a click on the pet.

To each new function you can add your own sounds, messages, particles effects, or even rez an object...

Oh I hear your thoughts , «it will be complicate and will requires a long configuration...» It don't ! in less then a minute you can add a new ability to your Yukiko or even change it's look with your own textures, shapes and designs !

Only few words in the notecard, drop your textures and sounds in Yukiko's inventory and you're ready to enjoy it !

What is customizable in my Yukiko ?

Yukiko is fully customizable and the only user created pet ! Yukiko is script generated, it mean the sculpts, the textures themselves are generated by the profile notecards, each Yukiko can be unique. And for the Yukiko abilities it's the same, you can really custom all the options and even create news, add buttons in the dialog box, add sounds, effects, and much more...

Creation is not your interest? Don't worry, Yukiko comes with all what you need to enjoy it immediately without doing anything!

How to change the profile of my Yukiko ?

To load a new profile and change the design and the abilities of your Yukiko, you must click it again, choose «Load Profile» in the dialog box and select an other profile. You can create your own profiles and add as much of them as you want !

How to create my own profiles and custom my Yukiko ?

It's really easy, and only with a simple notecard.

To create your first personal profile, you must edit the notecard «!config-My 1st profile-», open it and simply answer the questions, most of the questions only need a YES or a NO as response. When done, save it and replace «My 1st profile» in the notecard by your own profile name (you must always keep the !config at the beginning of the notecard name)

If you activated an option that requires to give an item (landmark, notecard or object) you must drop them in the Yukiko inventory with your new profile notecard. For that, simply right click your Yukiko and open the contents tab, then drop your own contents in Yukiko's inventory.

That's all ! Now just click your Yukiko again, your new profile is available in the dialog box !

I don't want to spend time with a configuration but I want different profiles for my Yukiko, it is possible ?

Of course, you can buy a custom profile in our store, or from any other resident.

Our profiles comes under the name of «Yukiko Spirit», if you buy one, simply place it on the ground close to your pet(s) and touch it.

It will open a dialog box with the names of your pets, choose one of them to give him the new profile. The contents will be automatically transfered to your Yukiko. Now all what you have to do is click again your Yukiko and choose the new profile available to load it. So easy !

I want to use 100% of the custom options available in Yukiko and create my own designs or even add scripts, it is possible?

Yes it is ! Yukiko is based on a unique modular coding technology and comes with an integrated API, your own scripts can run and communicate with Yukiko's scripts.

If you are more interested in graphic design you will really love Yukiko. You can find in the pack a texture template and all the sculpts parameters, you can also apply your own sculpts to Yukiko's shape in your profiles. All your Yukiko can be redesigned by you, but more then this simple thing, you can give out to anyone else the profile you created !

How to create my own Tattoos and skins with the templates ?

Really fun and easy, just right click the texture «Yukiko Tattoos Template» in your inventory and save it on your hard drive. Now you just have to open it with your favorite editor software. You don't know one ? So just try an online editor like Sumo paint to begin (<http://www.sumopaint.com/home/>). Now the template texture is open in your software, and all what you need to do is replace the example logo by your own. Done? OK, save your new texture as a .png (this format support the background transparency) and import it in SL, then just add it to your profile notecard and drop it in your Yukiko. Load your profile... Your logo is applied !

Repeat the same operation with the skin template for a full customization.

Can I give or sell my own profiles and contents to an other resident ?

Yes, just give them to a friend, when placed in his Yukiko's inventory the profile offered will be immediately available.

If you want to resell your profiles, contents and applications, you must use the up-grader script includes in the pack, simply drop your profile notecard, your contents and the up-grader script in a box, that's all. You are ready to sell your custom profile !

How to sell my profiles and create my own up-graders?

Nothing more simple! Create your profile notecard(s) and associate contents, drop them in a box with our up-grader script. What else? Nothing, you are ready to distribute your custom profile !

Can I add and run my own scripts in Yukiko ?

Developers API, the interaction with your own scripts is possible, your profiles functions can link a message of your choice with the ID 'API'

You can use linked messages to control the physics engine of your Yukiko.

If you have further questions you will find with your Yukiko a notecard full of explanations, so don't spend more of your time here, it's the moment to discover your new pet !
