

How to Choose a Beach

Here is a basic guide for narrowing down which beach will be best for you.

★NOTE: this product will need some terraforming.★

Make sure you have permission to terraform your parcel.
We offer assistance with terraforming if you need it.

1. ★COLOR★ - Decide which color of sand will match the environment you are looking to create:

- Natural - a neutral color that goes with any landscape
- Crystal - nearly white, for a more exotic tropical look
- Golden - a rich light brown hue, goes well with rocky coasts, and dark vegetation

2. ★SIZE★ - Figure out what amount of space you have to dedicate to your beach:

- small 15m
- medium 24m
- large 36m
- xlarge 55m
- extensive - consider buying a full pack

3. ★SHAPE★ - Do you want a nice straight stretch of beach along the coast, or are you looking to build curves around lagoons or go around corners?

If you wish to build curves or corners, please buy a set that is made to fit together. Clever use of the rocks enclosed with the beaches can be used to hide awkward edges, but beaches may not necessarily fit together unless you buy the set meant for that purpose.

Low Prim versions are intended to create straight beaches ONLY, and will not fit with the curves and corners.

♥ *If you still are not sure what will look best or what will fit, please contact me
(Tropical Bearsfoot) to make an appointment for a
demonstration of the various beaches at your parcel.♥*
