

Easy Visitor Manager 1.1

The manager is very easy to use, you probably won't need these instructions, but here they are just in case.

1. Set Up

Rezz the manager where you want it.
Left click on it to get the Main Menu shown here.
Only the owner of the object can access the menus.

Click Settings to configure the functions. The top of the Settings Menu shows you the current settings. Use the buttons below to change them.

You can change the range of the sensor, and how often it looks for avatars with the Sensr Range and Sensr Freq buttons.
(Lower range and less frequent scans will reduce lag.)

The Manager can be set to greet your visitors here.

If you want the Manager to give visitors items, then edit the manager with the SL editor (right mouse click) and drag the items into the Manager object via the Contents tab on the SL edit window.
Everything except the manager scripts will be given to new visitors.

If you want the Manager to invite visitors to join your group, make sure the Manager object is under that group. You can change this via the SL edit window.

The manager can send you a daily report of the names of visitors to your land by IM and/or Email. **N.B. You must give the manager your email address for the email function to work.**

To set your email click on Set Email Adr button and enter your email address via the SUBMIT box here.

2. Reports

The Manager can also give you reports immediately by IM or email.
From the Main Menu, open the Report Menu.

The Manager maintains two lists of Avatar names,
1. a full list of names since you set up the Manager,
2. a list of Avatar visitors in the last 24 hours.

You can have either list IMd or emailed to you.

You can also use this menu to clear the lists, and set the email address.

3. Feedback

I hope you like this product, please let me know if you have any problems or think of useful enhancements.
