

Thank you for taking this info sheet.

Where to start, we have so much to offer ;)

## **The Auctioneer Deluxe V2.0**

Auctioneer Deluxe is a Complete solution for your animal / breedable auctions!

designed not only to make the auctioneers job easier, but your customers will benefit from it too.

(See also our Caller HUD for a lot more options)

### **NEW FEATURES IN V2.0! (\* is Only available if the CallerHUD is purchased too)**

- Nicer design of the panels and stands
- Every item included in the system now has “Easy Script Replacement”, wich means if we send out a script fix or improvement. You no longer have to replace every script manually. The box we will send you will automaticly replace every scripts in each corresponding item.
- The System now comes with an auto updater, when you Rez the updater it will check our database to see if you are a valid customer and will after validation send you the new package (incase there is an updated version)
- The Rental system now comes in 2 versions. Single Rental box and as Panel / Rentalbox combo. The new Rental system has a few more functions: Lockable, Reserve, Change Sellers name (if panel is rented), Show / hide Floating text, add a Manager and size / position configurable via notecard.
- HUD received a complete makeover, and now comes in 3 colors  
HUD has a new Hidden panel, if linked with our Visitor Hud the Auctioneer can receive visitors bids on his or her HUD showing the auctioneer the name of the bidder and the price he / she bids.
- \* The Visitor HUD is included in the CallerHUD Package and is delivered in a vendor that visitors can click to receive their HUD. The visitor Hud will show every detail of the meeroo including the opening bid and “looking for” price. If the visitor clicks the Looking for price he/she will be presented a textbox where they can write their bids and click submit to send it to the auctioneer.
- \* CallerHUD is a great new addition, it sends a call to the Dropbox. The dropbox will then send all the auction forms straight into the caller HUD. The Caller can click a panel number on their HUD, the HUD will load the correct auction form corresponding with the panel number. And open a textbox for the caller to write the price he or she is looking for. Than click “Say” on the HUD will make the HUD say(using the Callers name!) in local chat the panel number, all the meeroos details and asking price. At the same time the Caller HUD sends the same details to the Visitor HUD so Its almost impossible now to get distracted and miss what the Auctioneer / Caller said or what was being asked.

## **Prim counts:**

Panels are 2 & 3 prims  
Info board is 24 prims  
Hud is 4 Prims  
rental boxes 1 prim  
Mailbox 4 prims  
Tipjar 2 prims

The Panels & Numbers light up, and the info board will show what panel & seller is up.

Makes it easy to follow.

## **This Package comes with:**

### **- Easy to use and configure Auctioneers HUD**

You can set your own communication channels,  
So only you and your auctioneers can operate the system.  
Every Auctioneer can set their own texts to speak when they press the going once, twice, three times, sold & future sale in the config card.  
(see Top of this document for new Features in V2.0)

### **- Numbered panels (separate & build in the stands)**

panels will automatically load the correct number texture  
From the configuration file after you set the panels name.  
(ofcourse you can replace them with your own textures)

### **- Rent-a-Panel rental boxes**

These are specially scripted for auctions.  
They won't bug people with reminder messages.  
They only show the seller's name when rented.  
upon rental they send the auction forms to the tenant.  
After the auction the auctioneer resets them all at once thru the HUD.  
(See top of this document for added Features in V2.0)

### **- Mailbox / Dropbox**

These are used for sellers to send their auction forms to the auctioneer.  
The Auctioneer (and Caller if you own the CallerHud) receive all the Auction forms in a folder if they click the "Collect Notes" button on their Hud.  
They don't have to be close to the dropbox to receive the folder!

Thru the build in menu the auctioneers or owner can enable/disable acceptance of notecards  
(when disabled nobody can drop notecards in them)

They automatically set the correct date, the auctioneer will receive a folder for example called "Auction Forms 2013-12-08"

### **- InfoBoard**

The info board will show wich panels are still available or who rented wich panel. When the auction is started, the active panel (Sellers name) will light up. So its easy for people to follow what panel the auctioneer is Talking about

### **- Tipjar**

Multi user tipjar, works with accesslist.  
Owner puts the names of the auctioneers in the accesslist and need to reload the config data.

Now the auctioneer on duty can login by clicking on the Tipjar and start collecting tips, the Jar will hover how much tips the auctioneer has received and when the auctioneer clicks it again it will log him or her out and pay the tips.

IF the autioneer "forgets" to logout.. the owner can force a logout , the Jar will clean the slot and pay the auctioneer the remaining tips.

Everything is made with sculpted prims and mesh to keep everything as low prim as possible.

Pfew...that was a lot of typing.. But I do hope it was easy to read and understandable.

If not , please do not hassitate to contact me.

Kind Regards,

Thorn Raymaker
